

SceneViewer

SceneViewer is an *Open Inventor* demonstration program which is used for viewing and editing Inventor 3d files. It demonstrates many aspects of Inventor, including: editors, viewers, 3d manipulators, selection, copy and paste, printing, and file reading and writing.

SceneViewer's SOURCE
is included with the
Inventor 3d Toolkit!

When SceneViewer is run, a window appears containing the Open Inventor **examiner viewer** and a **Motif** menu bar. The viewer allows the user to interactively change the view of the scene through direct manipulation, or indirect slider and push-button controls.

Viewer help cards can be displayed by clicking the left mouse button on the "?" button in the viewer buttons.
